HVAC Refrigerant Temperature Sensor GE-1920 for Automotive Applications

The refrigeration temperature sensor measures the refrigerant temperature both at the high pressure side and at the low pressure side of the line. The control module uses this information to maximize the performance of the HVAC system.

Applications

- High pressure line temperature of the condenser and receiver/drier unit side
- Low pressure refrigeration line temperature measurement of the evaporator side
- Battery coolant temperature

Features

- High accuracy and long term stability
- Fast response time
- Integral connector
- Existing field proven design
- Alternate RvT curves available
- 100°C Max operating temperature
- Plated steel body
- Other resistance and beta values available

Amphenol Advanced Sensors
GE-1920 Specifications

Operating Temperature Range
-40°C to 100°C (-40°F to 212°F)

Storage Temperature Range
-40°C to 125°C (-40°F to 257°F)

R @ 25°C (77°F)
2828Ω

Response Time
<14 seconds

Housing Material
Plated Steel

Weight
~13.8 grams

Connector
Packard Electric Micro-Pack

Mating Connector
P/N 1209 2438
